Use in sentence-transformers

sentence-transformers/paraphrase-xlm-r-multilingual-v1

This is a `sentence-transformers` model: It maps sentences & paragraphs to a 768 dimensional dense vector space and can be used for tasks like clustering or semantic search.

Usage (Sentence-Transformers)

Using this model becomes easy when you have `sentence-transformers` installed:

```
pip install -U sentence-transformers
```

Then you can use the model like this:

```
from sentence_transformers import SentenceTransformer
sentences = ["This is an example sentence", "Each sentence is converted"]

model = SentenceTransformer('sentence-transformers/paraphrase-xlm-r-multilingual-v1')
embeddings = model.encode(sentences)
print(embeddings)
```

Usage (HuggingFace Transformers)

Without `sentence-transformers`, you can use the model like this: First, you pass your input through the transformer model, then you have to apply the right pooling-operation on-top of the contextualized word embeddings:

```
from transformers import AutoTokenizer, AutoModel
import torch
```

Are there limits to the size of dataset I can use for training?

Amazon Machine Learning can train models on datasets up to 100 GB in size.

What is the maximum size of training dataset?

Amazon Machine Learning can train models on datasets up to 100 GB in size.

What algorithm does Amazon Machine Learning use to generate models?

Amazon Machine Learning currently uses an industry-standard logistic regression algorithm to generate models.

FAQ Bot

I want to order a spinach and feta pizza.

What size would you like?

I would like a medium pizza.

Do you want any sides with it?

No.

How would you like to pay?

I will pay with cash.

Where will you like it delivered?

O'Reilly Media, 2 Avenue de Lafayette 6th floor Boston, MA 02111 USA

We will get it delivered. Bon Appetit!

Flow-Based Bot

Hello, how are you?

I am fine. What did you do in the last weekend?

I went to a beach.

Great! I really like going to the beach, but I recently read news about how plastics are affecting sea animals. What do you think about plastic overuse?

I think we should control the use of plastic.

I agree with you. Speaking about it, did watch the movie The Revenant?

Yes, it was great.

Leonardo DiCaprio's performance in it was well deserved for an Oscar.

[Elon Musk](#) unleashed a torrent of stock sales, options exercises, tax payment sales and gifted shares last year totaling nearly \$22 billion. Yet even after unloading so much [Tesla](#) stock, he still owns a larger share of the company, thanks to his compensation package.

Musk sold \$16 billion in shares last year and, according to a filing with the U.S. Securities and Exchange Commission Monday, gifted 5 million shares, which are worth nearly \$6 billion, to an undisclosed charity or recipient in November. The sales and gifts bring his total to about \$22 billion — a combination of tax payments, cash in his pocket and the gift.

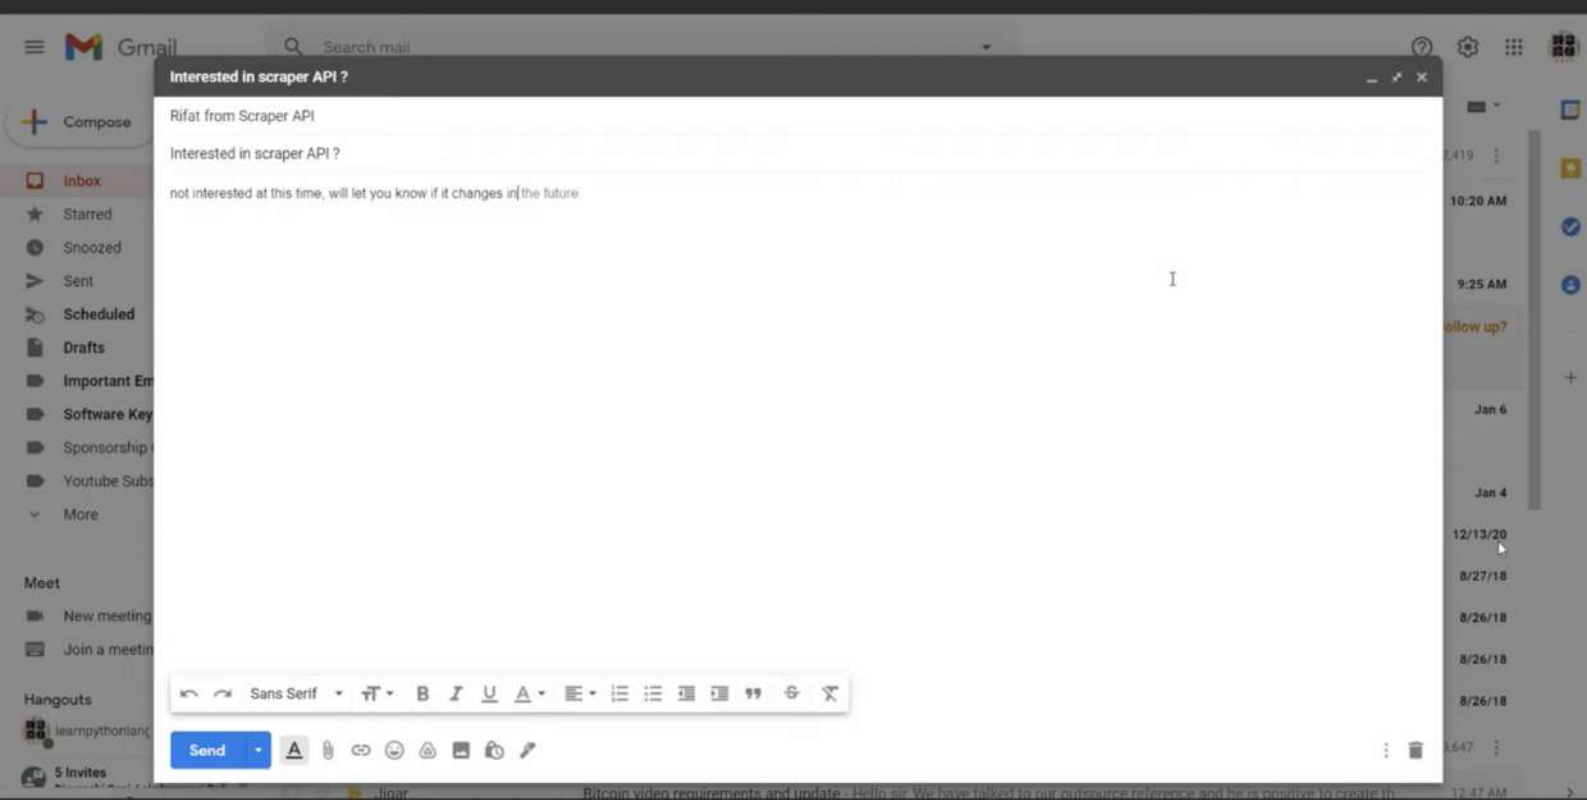

Yet because of the nature of the options exercises, Musk actually finished the year with a larger ownership stake — and more shares — in Tesla. In 2012, Musk was awarded options on 22.8 million shares worth about \$28 billion last fall when he started selling.

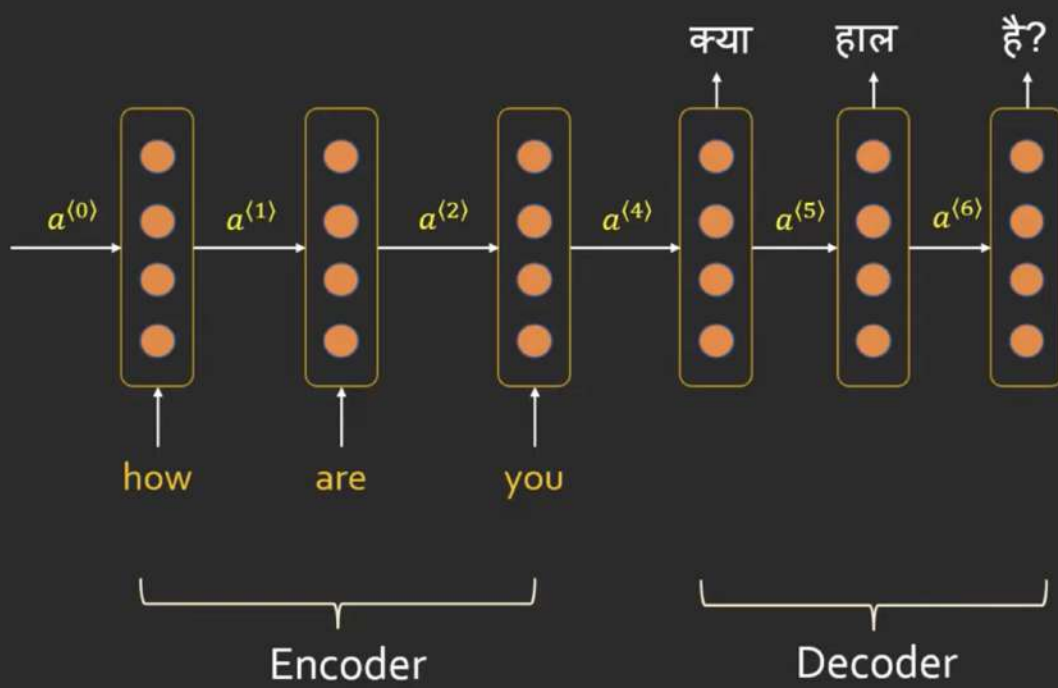

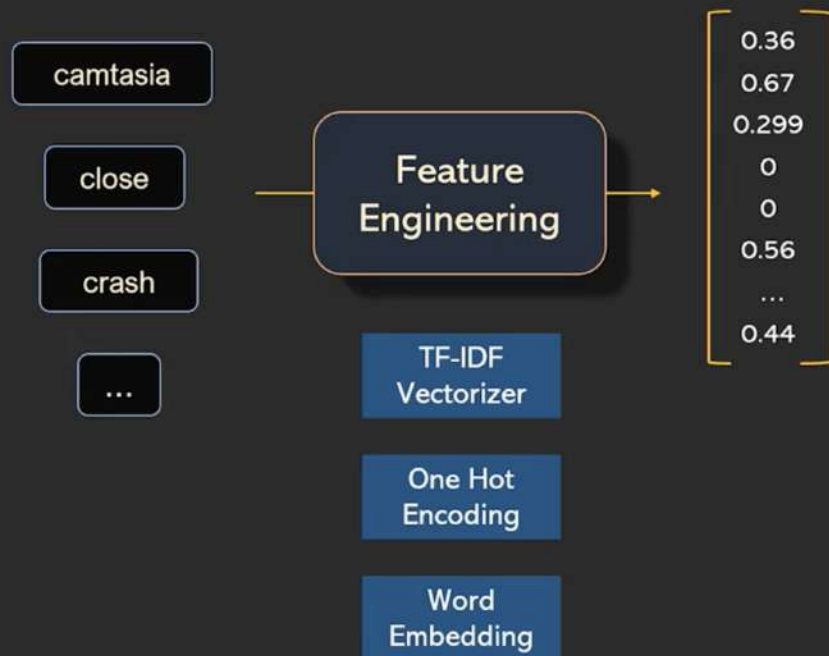

Elon Musk unloaded \$22 billion of Tesla stock — and still owns more now than a year ago
